

ANGEL BIT - FOR IMPROVED SAFETY

- Available in 27 and 28mm M16
- Successfully trialled in NSW coal mines
- Minimises risk of entanglement in mesh
- The bit will either cut or roll off the mesh compared to a standard 2 wing bit whereby entanglement was possible
- 2 wing design enables flushing properties to be equivalent of the traditional design
- Negative rake to promote aggressive drilling ability
- Faster penetration than standard spade bit – improved drilling time
- Less likely to block in soft or clay type conditions
- Suitable for roof and rib drilling

10c from the sale of every Angel Bit is donated to the Westpac Rescue Helicopter
